## VACCINATION MANAGEMENT SERVICE

### VACCINE MANAGEMENT MADE EASY

#### A STREAMLINED SERVICE

The TAAP Vaccination Management Service provides a simple, flexible and easy to use web app for vaccination hubs to vaccinate recipients.

This includes the creation of Calendars with allocated booking slots against different locations and rooms, recipient invites, dose capacity management, bulk mailers to email those on waiting lists for bookings, and symptom tracking among other things.

For any organisation providing vaccines, the Vaccination Management Service streamlines and simplifies the vaccination process for vaccination hub staff who can use the service to book their appointments. The service can be integrated and implemented with speed as it is easy to configure allowing organisations to tailor the service to their specific needs.

The service is comprised of 5 modules, Self Registration, Vaccination Form, Vaccine Campaign Manager, Reception Arrivals and Vaccination Data Logging, and Patient Symptom Tracker. Each module is specifically designed to ensure a smooth process from self registration at the beginning of the process to symptom tracking following the vaccination itself.

The use of Calendars provides flexibility to the organisation as they have full control of how many rooms, bookings, working days and appointment slots each Calendar is assigned.

To find out more about the TAAP Vaccination Management Service, get in contact to receive a call back from one of our solution experts.

## VACCINATION MANAGEMENT SERVICE

### KEY FEATURES

#### VACCINATION FORM

Consent and vaccination sign up form prior to any vaccinations commencing.

#### VACCINE BOOKING

Patients are able to book their own vaccination appointments within the vaccination hubs control rather than being allocated slots.

#### WAITING LIST

Where there are no available slots remaining for vaccinations, patients will be added to a waiting list until slots becomes available.

#### EMAIL AND SMS TEMPLATES AND REMINDERS

Ready made templates are sent to recipients one day prior and on the morning of their appointments.

#### SYMPTOM TRACKING

Once recipients have had their vaccine, staff can record any symptoms using the Symptom Tracking feature.

#### BULK MAILERS

The Bulk Mailer functionality allows emails to be sent in large amounts to potential recipients of the vaccine to sign up and book their slot.

#### SELF REGISTRATION

Staff can access the Vaccine Portal to register using their email and SMS for 2FA.

#### REPORTING & INSIGHTS

Live availability (By Day/Overall)

#### CALENDARS

Create schedules for appointment slots to be created. Each Calendar can be adjusted by days for appointments, how many appointment slots throughout the day and how many rooms are allocated for providing vaccinations.

#### APPOINTMENT SET UP

Vaccine dose allocation rules are set whereby once all allocated doses have been booked, patients are automatically placed on the Waiting List.

#### VACCINE CAMPAIGN

Multiple campaigns can run at the same time for each dose/batch of vaccine. Campaigns can be easily configured to tailor to the needs of specific vaccination requirements.

#### CANCELLATIONS

Cancellations can only be made prior to attending the first appointment. Once cancelled, the booking slot is available for another person to book onto.
